Practicare goluri in pereti parter - corp C3
Sc. 1:50

Schema generală

1) La executia structurii se vor respecta prevederile din caietul de sarcini anexat documentatiei.
2) Inainte de turnarea peretilor si placilor se va solicita avizul proiectantilor de arhitectura si de instalatii.
3) La pozitionarea golurilor nu se vor taia etrierii sau armaturile curente ale grinzilor sau peretilor ci se vor deplasa la limita golului.
4) Golurile din grinzi si pereti se vor borda cu teava metalica. Etrierii se vor deplasa pana la limita tevii metalice.
5) La practicarea golurilor in structura existenta, pentru a nu se taia accidental barele de armatura, se va realiza un sondaj pentru descoperirea pozitiei reale a barelor - prin spargerea locala a acoperirii cu beton a armaturii pe ambele fete ale elementului.
6) Golurile in grinzi se vor pozitiona la 5 cm fata de intradosul placii de beton armat, iar pentru tevile cu panta, se va mari, treptat, aceasta distanta fata de intradosul placii.

3. Se curata de impuritati prin periere intreaga suprafata precum si rosturile dintre caramizi pentru
4. Se curata timp de 10 minute cu jet de aer si apa sub presiune
5. Suprafata de aplicacre a torcretului se va mentine umeda cateva ore inainte de torcretare
6. Se injecteaza fisurile si crapaturile cu mortar de reparatie Mapei -ANTIQUE I sau mortar pe baza de rasini epoxidice S&P Resin 50 sau similar
7. Se realizeaza gauri Ø14 pentru zonele in care torcretul se aplica pe ambele fete
8. Se fixeaza armaturile Ø8/20/20 din PC 52 prin intermediul unor ancore Ø10 amplasate in gaurile Ø14 injectate cu mortar de ciment
9. Aplicarea unei amorse constituita din ciment si nisip 0-1mm parti egale in greutate
10. Imediat dupa aplicarea amorsei se aplica stratul de beton.
